

Invitation letter for scientific conference

"MODELS OF ORGANIZATION AND REALIZATION OF STUDENTS PROFESSIONAL PRACTICES AND THEIR APPLICABILITY IN HIGHER EDUCATION "

Dear Colleagues,

It is our honor and pleasure to invite you to the international conference "Models of Organization and Realization of Student Professional Practices and Their Applicability in Higher Education" organized by the Higher School for Inspection and Personnel Management in Split, the University of Baltazar Zaprešić and the University of Adriatic Bar, which will be held in Split from August 30 and 31, 2019. The purpose of the Conference is to develop, improve and implement professional practice in higher education.

We invite you to present your current research and be a part of the contemporary transformation of today's professional practice innovation in higher education.

Deadline to submit topic and submit abstract by June 20, 2019.

Deadline for submission of completed works is July 20, 2019.

ABOUT THE CONFERENCE

Objective and tasks of the Conference

- Consideration of the model and organization of professional practice of students in higher education.
- Promote the solution of the challenges of professional practice through an interdisciplinary approach,
- Inaugurate new models and insights into students' professional practice
- Connecting, sharing past experiences
- Strengthening the collaboration of scientists / researchers and the economic community.

The circle of contemporary reform tendencies spans the entire education system, and in particular the domain of higher education. The wave of major innovations that have engulfed the higher education system on the European continent, based on a new quality of education oriented towards exploring the future, fostering competitiveness, diversity, decentralization, flexibility and mobility of all actors, opens up a real, unique opportunity to eliminate and reject any misconceptions and misconceptions that (have) rendered the existing higher education system ineffective, inefficient and

uneconomic. Higher education institutions strive to organize their work in accordance with the newly established principles, which not only implies a new role of lecturer and student, but also includes a new, different approach to the organization and realization of the teaching process. It is a significant issue for students to develop the ability to integrate theoretical knowledge and to transform and apply it in a practical context. It is the reflexive practice that should develop students' abilities to observe, decide, continually explore, collaborate, and communicate with others independently. New approaches to study through attractive, innovative, interdisciplinary and unique program, through synergy of professional and entrepreneurial spirit, strive to respond to the needs of a dynamic labor market, contribute to strengthening the educational sector that must underpin the development of a modern democratic knowledge society and educate professional, independent, responsible and highly motivated professionals who will contribute to the development of science and participate in the further development of higher education.

The purpose of professional practice is to monitor tasks and workload, solve problems, assist workers in dealing with work situations and moral and ethical dilemmas, and promote staff development

- The importance of the professional practice of students in the immediate present, the new technologies they carry, innovation and the speed of change;
- Implementation of modern technologies in the field of professional practice, and building a sustainable connection and better understanding of students' needs;
- Discovering new educational opportunities through the use of innovation and technology through hands-on work
- New trends brought about by digitization in the process of gaining practical knowledge and learning;
- The role of hands-on training on the development of expertise through innovation;

The innovativeness of the professional practice program is based on:

- Transparency - Embracing the global transparency trend by providing more information to students to help them gain full insight into the process of their future profession.
- Risk-based approach - Developing new risk assessment tools for the facilities and activities students are introduced to.
- Data integrity - address the emerging problem of data integrity by enhancing student training to identify data integrity issues and collaborate with regulatory partners to coordinate the approach of the control function.

Possible topics for the Conference - orientation list:

Quality management system in the economy

Industrial waste management

Maintenance of technical systems

Maritime waste management

Quality control - standards

New Models for the Organization and Realization of Student Professional Practices

Preparation and implementation of administrative work activities

Research and analysis of documentation related to the institution of student internship

Erasmus + and student professional practice

Opportunities for professional practice

Organization of professional practice

Practice abroad

Evaluation of professional practice

- Professional practice is a mandatory part of the teaching process
- Professional practice related to writing a student's final work

➤ Student practice and private sector initiative
Registration fee for accepted work: 50 euros in kuna equivalent. The registration fee includes a book of abstracts (1 copy) and a certificate of participation in the Conference

The authors submit their abstracts in Croatian and English language here. Authors who submit the paper in English also submit the abstract in English.

Name and surname of the author (separate multiple comma):

Department / Position: _____

Organization / Company: _____
